VI. CONCLUSION

Our tool is very effective patient satisfaction and clinical healthcare data analytics. From Fig4-7 [17] we should try to represent patient satisfaction data clearly. It provides to easily represent data for data analytics using statistical formulas. In future work these tools are increased scalable system of patient satisfaction. [18] [19].

There is more point of view our tool uses in public healthcare system. It plays an important role in regulating our life in patient and clinical healthcare data [20] analytics.

VII. FUTURE PLAN

Our future plans include incorporating a national level dataset from the Bangladesh public healthcare context and developing a Real-time dashboard to forecast public health issues. We want to develop our patient satisfaction into clinical healthcare in public sector in Bangladesh and we want to use our patient satisfaction web based tools with professionally in marketplace and trade.
